

# Farm to Home

*Revolutionizing the Agricultural Supply Chain*

---

Eliminating brokers • Empowering farmers • Fair prices for all

# The Problem with Today's System

## Broker Takes Most Profit

Middlemen take 30–50% cut between farmer and buyer. Farmers earn very little despite hard work.

## No Direct Communication

Farmers and buyers cannot talk directly. Price is decided by broker, not by fair market value.

## Price Unfairness

Buyers pay high prices. Farmers receive low prices. Only the broker profits from this gap.

**Farm to Home solves this by connecting farmers directly to buyers — no broker needed!**

# Our Solution — Direct Connection

## FARMERS

- List fresh produce
- Set own prices
- Get fair payment
- Track orders
- Build reputation

## FARM TO HOME PLATFORM

- ✓ Price negotiation
- ✓ Order management
- ✓ Secure payments
- ✓ Logistics tracking
- ✓ Quality control

## BUYERS

- Restaurants
- Food factories
- Fresh produce
- Lower costs
- Verified quality

**NO BROKER — NO MIDDLEMAN — DIRECT B2B MARKETPLACE**

# Core Platform Features

## Inventory Management

Real-time updates on available produce with live stock tracking

## Price Negotiation

Direct tools for buyers and sellers to discuss and agree on pricing

## Logistics & Delivery

Managing physical movement of goods from farm to buyer

## Quality Control

Checks to ensure produce meets buyer standards before delivery

## Secure Payments

Trust-building payment systems for broker-less transactions

## Mobile Access

Apps for farmers and web portal for buyers with real-time data

# Why Agile Development?

## ✓ Agile Works Best

- Gradual feature rollout
- Adapt to farmer & buyer needs
- Early MVP launch possible
- Real-time inventory builds incrementally
- Price negotiation tested early

## ✗ Waterfall Problems

- Fixed requirements don't work for farmers
- Delayed testing makes fixes expensive
- No early launch possible
- High risk if initial plan is wrong
- Cannot respond to market changes

# System Architecture

## Frontend Layer

Mobile app (Farmers) • Web portal (Buyers) • Admin dashboard

## Backend / API Layer

User Auth • Product Listings • Order Management • Price Negotiation

## Database Layer

Farmers DB • Products DB • Orders DB • Payments DB

## External Services

Payment Gateway • GPS / Logistics Tracking • SMS / Email Notifications

All data secured with role-based access control and encrypted payment APIs

# Cost & Effort Estimation (COCOMO)

# Real-World Impact

## For Farmers

- ✓ 30-50% more income
- ✓ Direct market access
- ✓ No broker dependency
- ✓ Fair price always

## For Buyers

- ✓ Lower purchase cost
- ✓ Fresh quality produce
- ✓ Verified farm origins
- ✓ Faster delivery

## For India

- ✓ Stronger farm economy
- ✓ Less food wastage
- ✓ Tech for rural India
- ✓ Scalable nationwide

# Development Roadmap

Phase 1  
Month 1-2

## MVP Launch

User registration • Product listings • Basic search

Phase 2  
Month 3-4

## Core Features

Price negotiation • Order management • Payment integration

Phase 3  
Month 5

## Logistics

GPS tracking • Delivery management • Quality checks

Phase 4  
Month 6

## Scale & Polish

Performance testing • Mobile app • Nationwide rollout

**Total: 6 months • Team: 1-2 developers • Methodology: Agile sprints**

# Thank You!
